Nobody Beats Our Prices. Guaranteed.

If you find a current lower price on an identical, in-stock item from a local retailer's store or website, we will match the price and beat it by 10%. If you find a current lower price on an identical, in-stock item from a Canadian online only retailer's website, we will price match only. Items from online-only retailers are not eligible for the 10% discount. Prices will be matched to localized online prices if available. See associate for complete term and conditions.

Disclaimer

IMPORTANT: Before installing manufacturer specific products, refer to the manufacturer's installation instructions.

Consumer Information Sheet for MicroPro Sienna® Treated Wood

Cut ends / Field cuts – When building your outdoor project with pressure treated wood it is important to protect the cut ends, drill holes, and other field cuts. Failure to apply an end-cut wood preservative or Cut-N-Seal® at the time of construction will void the MicroPro Sienna Lifetime Residential Limited Warranty.

- For pressure treated wood used in ground contact applications, two applications of a brush-on copper naphthenate based end-cut preservative must be applied to all saw cuts, drill holes and other field cuts at the time of construction before the wood is installed. Follow the manufacturer's directions for proper application.
- For pressure treated wood used in above ground applications, such as deck boards, railings, post tops or fence boards, a brush-on end-cut wood preservative or Cut-N-Seal product should be applied to all saw cuts, drill holes and other field cuts at the time of construction. Follow the manufacturer's directions for proper application.

Fasteners – Wood treated with MicroPro technology exhibits corrosion rates on metal products similar to untreated wood. Use fasteners and hardware designed for exterior construction that are in compliance with the manufacturer's recommendations and the building codes for their intended use.

Aluminum – Aluminum building products may be placed in direct contact with MicroPro Sienna Treated Wood products used for interior uses and above ground exterior applications where the wood is not exposed to frequent and prolonged wetting, such as decks and fencing. MicroPro Sienna Treated Wood in direct contact with aluminum products should only be used in code compliant construction applications that provide proper water drainage and do not allow the wood to be exposed to, or remain in contact with a continual moisture source, standing water or water immersion. In addition, MicroPro Sienna Treated Wood should not be encased, sealed, or wrapped with aluminum products where moisture or water can be trapped, so as to avoid pitting or other undesirable results.
